

A customized call handling solution for Health Care System

Emergencies

Pre-configure groups of persons that need to be reached quickly in case of emergency. e.g.: Fire, flood, serious accident, collisions, hurricane, virus alert (chicken flue) or any other event requiring a quick turn around.

Pager management

Reach groups of persons in only one click. Select the desired group, enter your message and send it out simultaneously to all group members.

Management of availabilities

This product manages the availability of doctors, surgeons or any other professional or staff member.

Search for resources by availability, qualification, seniority or any other criterias required for good management of your hospital.

Make a quick search according to your criterias and just click on the telephone number of the person that you wish to reach.

Staff search? Here's the screen required!

Call Management to rooms

Find patients quickly and efficiently. SIT-Health Care is synchronized directly from your management tools through an O.D.B.C. interface or through our own data base. The application automatically updates the operator's screen thus simplifying call management. A quick search on the patient's name, a simple click and the call is transferred. End of tedious researches.

Locator

The locator allows any application code holder:

- to go to our internet web site or to your own depending on your choice of implementation,
- to indicate his status, his availability,
- to send a message or to modify the note related to the button representing it on the operator's console or even the default transfer number.
