

CALL RECORDING SOFTWARE

komlog

OVERVIEW

The KOMLOG recording software is an analog, digital and IP recording solution. It is designed for various markets such as public safety, air traffic control, corporate security, rail, marine, government, call centers, etc.

The browser-based interface uses a highly secure protocol (HTTPS). Access levels can be set based on roles and through selection of rights.

Secure playback can be done remotely on any workstation. Its interface is easy to use and versatile.
